## Heat Transfer

<b>Experimental Technique for Heat Transfer Measurements on Fast Moving Sprayed Surfaces</b> M. Pohanka, H. Bellerova, and M. Raudensky, .....	3
<b>Accurate Determination of Surface Heat Fluxes During Quenching Characterized by Boiling Water Heat Transfer</b> M. A. Wells and K. J. Daun, .....	16
<b>Heat Transfer During Quenching and Assessment of Quench Severity—A Review</b> K. Narayan Prabhu and P. Fernandes, .....	40
<b>Formulation of a Guideline for the Determination of Heat Transfer Coefficient during Gas Quenching</b> T. Luebben, M. Lohrmann, S. Segerberg, and P. Sommer, .....	63
<b>Determination of Surface Heat Transfer Coefficients of Cr12MoV Steel Cylinder during High-Speed Gas Quenching at Atmospheric Pressure</b> C. Heming, L. Jianyun, L. Ziliang, H. Lijun, and H. Jie, .....	84
<b>Enhancement and Local Regulation of Metal Quenching Using Atomized Sprays</b> U. Alam, J. Krol, E. Specht, and J. Schmidt, .....	91
<b>The Effect of Agitation and Quenchant Temperature on the Heat Transfer Coefficients for 6061 Aluminum Alloy Quenched in Distilled Water</b> M. Maniruzzaman, M. Fontecchio, and R. D. Sisson, Jr., .....	104

## Modeling and Simulation

<b>A Review on Modeling and Simulation of Quenching</b> C. Şimşir and C. H. Gür, .....	117
<b>Modeling of Quenching and Tempering Induced Phase Transformations in Steels</b> P. T. Rajeev, L. Jin, T. N. Farris, and S. Chandrasekar, .....	157
<b>Improving Control of a Quenching Process by Coupling Analysis Methods</b> A. Banka, J. Franklin, Z. Li, B. L. Ferguson, A. Freborg, and M. Aronov, .....	186
<b>Generalized Equation for Cooling Time Evaluation and Its Verification by CFD Analysis</b> P. Krukovskiy, N. Kobasko, and D. Yurchenko, .....	205
<b>Computer Simulation of Quenched Steel Working Stress</b> B. Smoljan, S. Smokvina Hanza, and D. Iljkić, .....	228
<b>A Novel Approach to Model Moving Heat Sources</b> F. D. Fischer, C. Krempaszky, J. Očenášek, and E. Werner, .....	245
<b>Analysis of Stress Concentration around Inclusions due to Thermally Induced Strain to the Steel Matrix</b> M. R. Allazadeh, C. I. Garcia, A. J. DeArdo, and M. R. Lovell, .....	253
<b>Considering the Body-Centered Cubic Lattice Parameter of <math>\alpha</math>-Fe Alloys versus Concentrations of Solved Elements</b> V. P. Filippova, .....	269

<b>Application of thermodynamics and kinetics in the designing of new type TRIP steels concerning Al and P effects</b>	
L. Li, S. G. Huang, L. Wang, Y. L. He, J. Vleugels, and O. Van der Biest, . . . . .	284
<b>Model of Solid State Transformations of Ductile Cast Iron GJS-600</b>	
V. Runser and V. Schulze, . . . . .	295

### **Distortion and Residual Stresses**

<b>Using Polyalkylene Glycol Quenchants to Effectively Control Distortion and Residual Stresses in Heat Treated Aluminum Alloys</b>	
T. Croucher, . . . . .	309
<b>Minimizing Machining Distortion in Aluminum Alloys through Successful Application of Uphill Quenching—A Process Overview</b>	
T. Croucher, . . . . .	332
<b>Explanation of the Origin of Distortion and Residual Stress in Carburized Ring Using Computer Simulation</b>	
K. Arimoto, S. Yamanaka, and K. Funatani, . . . . .	352
<b>The Analysis and Control of Distortion in Carbonitrided and Nitrocarburized Thin-Shelled Plain Carbon Steel Automotive Powertrain Components</b>	
V. Campagna, D. O. Northwood, R. Bowers, X. Sun, and P. Bauerle, . . . . .	364
<b>The Effect of Core and Carburized Surface Microstructural Stability on Residual Stress Evolution during Tempering</b>	
J. Vatauvuk, M. Zicari di Monte, and A. A. Couto, . . . . .	387
<b>Explanation on the Origin of Distortion in Induction Hardened Ring Specimens by Computer Simulation</b>	
T. Horino, F. Ikuta, K. Arimoto, C. Jin, and S. Tamura, . . . . .	398
<b>Optimum Strategies to Reduce Residual Stresses and Distortion during the Metal Quenching Process</b>	
A. K. Nallathambi, Y. Kaymak, E. Specht, and A. Bertram, . . . . .	411
<b>Numerical Simulation of Residual Stresses in Quenched Steel Bodies Using Subroutines to Represent TTT and CCT Diagrams</b>	
E. M. Bortoleto, C. F. Lagatta, M. G. Di Vernieri Cuppari, I. F. Machado, and R. Martins de Souza, . . . . .	436
<b>Prediction of Distortion of Automotive Pinion Gears during Quenching Using CFD and FEA</b>	
D. S. MacKenzie, A. Kumar, H. Metwally, S. Paingankar, Z. Li, and B. L. Ferguson, . . . .	450

### **Property Predictions**

<b>Prediction of Quench-Hardness within the Whole Volume of Axially Symmetric Workpieces of Any Shape</b>	
B. Liščić, S. Singer, and B. Smoljan, . . . . .	467
<b>Correlation between Thermal and Mechanical Properties of the 10NiCr11</b>	
T. Ghrib, M. Bouhafs, and N. Yacoubi, . . . . .	489
<b>An Efficient Numerical Algorithm for the Prediction of Thermal and Microstructure Fields during Quenching of Steel Rods</b>	
S. K. Ali, M. S. Hamed, and M. F. Lightstone, . . . . .	500

### **Quenchants and Quenching**

<b>Starch-Based Quenchants as an Eco-Friendly Alternative to Quenching Oil</b>	
S. S. Sahay, . . . . .	525

<b>Comparison of Structure and Quenching Performance of Vegetable Oils</b> E. C. de Souza, M. R. Fernandes, S. C. M. Augustinho, L. de Campos Franceschini Canale, and G. E. Totten, . . . . .	531
<b>Severity of Quenching and Kinetics of Wetting of Nanofluids and Vegetable Oils</b> V. Jagannath and K. N. Prabhu, . . . . .	571
<b>An Investigation on Quenching Performance of Hot Alkaline Bath</b> S. Raygan, J. Rassizadehghani, and M. Askari, . . . . .	584
<b>A Feasibility Study of the Use of Bismuth Bath to Replace Lead Bath as the Quenching Media for Steel Heat-Treating</b> J. Ru and Z. Wang, . . . . .	596
<b>Spray Quenching in Induction Hardening Applications</b> V. Rudnev, . . . . .	609
<b>Technology and Applications of Alternately Timed Quenching Technology</b> N. Chen, X. Zuo, S. Zhou, and J. Xu, . . . . .	622
<b>One More Discussion “What is Intensive Quenching Process?”</b> N. I. Kobasko, M. A. Aronov, J. A. Powell, and G. E. Totten, . . . . .	629
<b>Energy Efficient and Eco-friendly Intensively Quenched Limited Hardenability Low Alloy Steels</b> N. I. Kobasko, . . . . .	644
<b>An Overview of Technology and Equipment for Hardening of Large Steel Parts</b> L. N. Deyneko, N. I. Kobasko, V. V. Dobryvechir, and E. I. Litvinenko, . . . . .	662
<b>Accelerated Cooling of Steel Plates: The Time Has Come</b> A. A. Gorni and J. H. D. da Silveira, . . . . .	682
<b>Overview of Pearlitic Rail Steel: Accelerated Cooling, Quenching, Microstructure, and Mechanical Properties</b> S. S. Sahay, G. Mohapatra, and G. E. Totten, . . . . .	692
<b>Water and Polymer Quenching of Aluminum Alloys: A Review of the Effect of Surface Condition, Water Temperature, and Polymer Quenchant Concentration on the Yield Strength of 7075-T6 Aluminum Plate</b> G. S. Sarmiento, C. Bronzini, A. C. Canale, L. C. F. Canale, and G. E. Totten, . . . . .	728

## Gas Quenching

<b>Gas-Jet Quenching</b> P. Stratton, . . . . .	757
<b>Quenching Homogeneity and Intensity Improvement in Batch Mode High Pressure Gas Quenching</b> R.-R. Schmidt and U. Fritsching, . . . . .	776
<b>Gas-Cooling of Multiple Short Inline Disks in Flow Along Their Axis</b> N. Lior and D. Papadopoulos, . . . . .	795
<b>Numerical Simulation of the Mechanical Properties of Cr12 Steel during Gas Quenching</b> Z. Li, H. Cheng, J. Li, and L. Hou, . . . . .	820

## Hardenability

<b>Enhanced Hardenability through Application of Magnetic Fields</b> I. F. Machado, . . . . .	833
<b>A New Method to Study the Effect of Cooling Rate on the Decomposition of Austenite in Advanced High Strength Sheet Steels</b> K. Cho, C. I. Garcia, M. Hua, J. Lee, Y. S. Ahn, and A. J. DeArdo, . . . . .	843

## **Cooling Curve Analysis Methodologies**

<b>Quenchant Characterization by Cooling Curve Analysis</b> L. C. F. Canale, X. Luo, X. Yao, and G. E. Totten, .....	861
<b>Cooling Characteristic Test of Quenching Media</b> G.-y. Zeng, .....	900
<b>A Complete System for Testing and Evaluation of Quenchants and Quenching Systems</b> H. Kristoffersen, E. Troell, I. Felde, and J. Bodin, .....	914
<b>Effects of Cooling Rate Fluctuation on Cooling and Transformation Behavior of Steel upon Direct Quenching</b> X. Luo and J. Li, .....	935
<b>Correlation between Cooling Curves Obtained with a Silver Probe and Quenching Properties of 5140 Steel Bars</b> R. S. Wang, Y. Wang, and L. P. Su, .....	953
<b>Measurement of the Cooling Power of Polyethylene Glycol Aqueous Solutions Used as Quenching Media</b> R. Ikkene, Z. Koudil, and M. Mouzali, .....	977
<b>Evolution of Quench Factor Analysis: A Review</b> P. M. Kavalco and L. C. F. Canale, .....	991
<b>Analysis of the Segerberg Hardening Power Equation</b> C. Chun-huai and Z. Jing-en, .....	1021
<b>The Influence of Surface Temperature on Rewetting Behavior During Immersion Quenching of Hollow and Solid Cylinders</b> F. Frerichs and Th. Luebben, .....	1032

## **Dilatometric Analysis**

<b>Dilatometric Analysis to Study Aging of Aluminum Alloys</b> R. Gerosa, B. Rivolta, and U. Derudi, .....	1055
<b>Optimization of the Heat Treatment of a 17-4 PH Stainless Steel by Dilatometric Technique</b> R. Gerosa, B. Rivolta, and A. Sala, .....	1066
<b>Author Index</b> .....	1077
<b>Subject Index</b> .....	1081
